

# Boost the value of your hay production

Discover HAYTECH, the smart solution designed to improve the profitability of hay production. Stock protection, quality monitoring, surround yourself with the ultimate assistant, designed for and with professionals in the field.

Used every day by more than 1700 producers, cooperatives and producers

# A single interface for complete hay management

Developed with professionals, HAYTECH is the simplest and most powerful solution to optimize the profitability of your haystacks.

## Secure your hay production

HAYTECH alerts you in case of abnormal heating and allows you to anticipate the risk of hay fire. Do not take the risk of losing your hay production.

Check the quality of your production in real time on your dashboard – access live data from your hay probes and ensure that none of your bales exceed the fermentation threshold.

## Reduce labor costs

HAYTECH limits the risk of work accidents by giving you access to all information remotely. Limit dangerous handling and monitor your hay production safely – from any device, wherever you are.

## Optimize your production

HAYTECH offers a nutritional value indicator for your forage, helping you optimise production. It allows you to control forage quality during storage, potentially increasing milk production and prioritising pastures based on preservation quality.

With HAYTECH Feeding Insight, you can also select the best hay to balance the feed mix for increased production. Define your cattle type, feeding goals, and receive smart recommendations on which stacks to use.

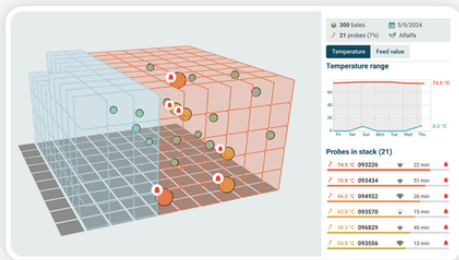

## Reduce your concentrated feed budget

By better controlling the quality of your forage, HAYTECH helps you reduce your dependence on concentrated feed and achieve significant savings on your annual budget.

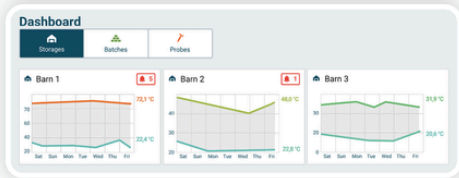

# View your entire stock at a glance

Both global and ultra-precise, HAYTECH allows you to monitor your entire storage site regardless of the size of your production.

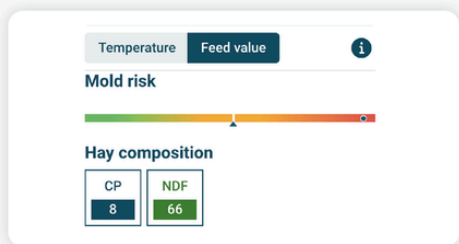

## Monitor the temperature of your entire production

HAYTECH offers a complete 3D view of your operation. Easily identify risk areas using an intuitive colour-coded system and visualise your storages and hay stacks in real time.

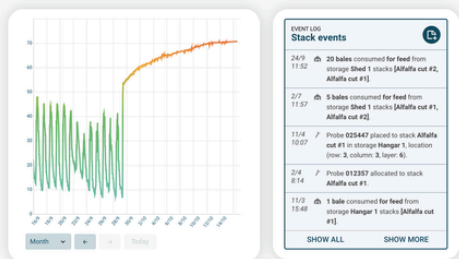

The dashboard displays your highest and lowest temperatures, current weather conditions, and your top hay stacks. You'll instantly see if any temperature warnings are active or if batches need stacking.

## Track the live progress of your forage quality

Access the nutritional value of your hay with our feed value indicator, including mould risk and key composition data such as CP and NDF, helping you maintain optimal forage quality over time.

## Access the complete temperature history of each forage bale

With a single click, open the temperature history tracking and enhance the traceability of your forage. Certify the precise quality level of your hay to buyers with full bale history.

## Manage your inventory and operations

Keep track of your bales, probes, batches, stacks, storages, and cattle in one place. The HAYTECH dashboard also includes a full event log that automatically records every action — from new batch creation to temperature alerts — and allows you and your team to add your own notes for seamless collaboration.

# Discover the smartest hay quality monitoring system

HAYTECH is the revolution that gives you access to accurate real-time tracking through an intuitive and reliable interface.

## Full wireless monitoring system

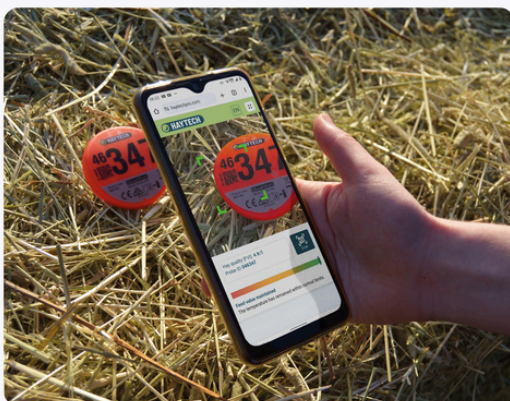

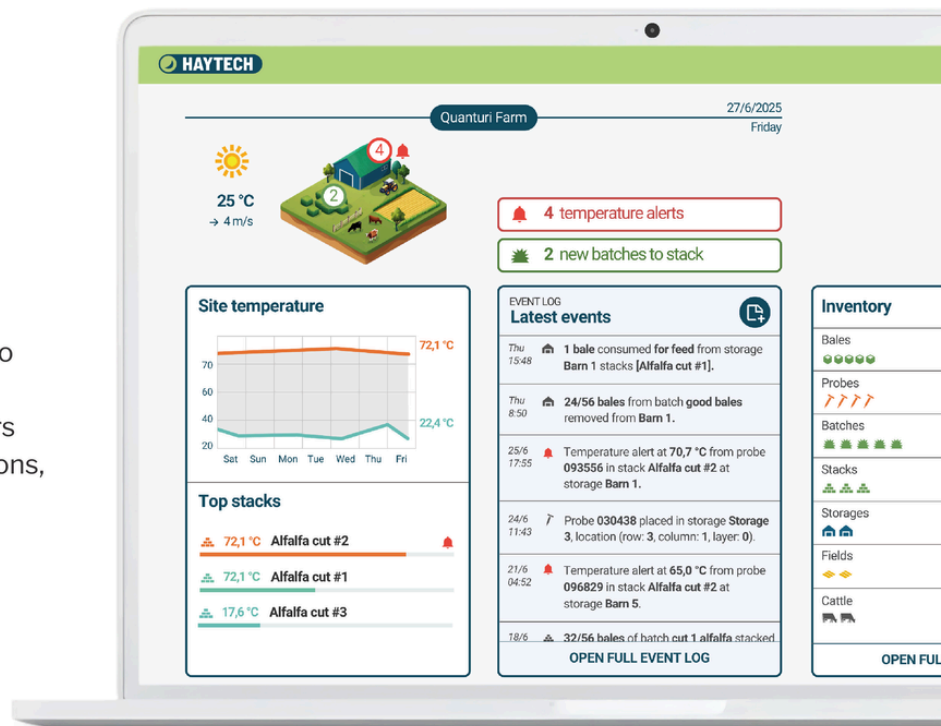

- ✓ Dashboard offering a complete 24/7 view of your operating site
- ✓ Recyclable probes designed for any type of fodder
- ✓ Real-time access from computer, tablet, or smartphone

## Complete mapping

- ✓ Complete site overview
- ✓ Storage area layouts
- ✓ Haystack positioning in sheds
- ✓ 3D visualisation of temperature distribution

## Customization of alert levels

- ✓ Configurable notifications tailored to your risk levels
- ✓ Unlimited number of alerts and users
- ✓ Customisable settings for notifications, alert thresholds, and user access

## Scan, Check, Feed: Haytechpro.com

Access real-time data by scanning QR codes on your existing HAYTECH probes with haytechpro.com. This easy-to-use app helps you check hay quality instantly, ensuring optimal feed for your livestock and maximizing their performance.

# Join the HAYTECH community

HAYTECH makes it possible every day to improve the safety and profitability of farms around the world.

equipped

## Our users talk about HAYTECH better than we do

*« The quality of the fodder with which I feed my animals is very important to me. The HAYTECH system allows me to trace the quality of my hay by monitoring its temperature. »*

**Marie ROY, farmer in Vevy - France**

*« I was always worried that my hay would catch fire, I always had to go monitor it. With HAYTECH, I have finally found peace of mind. »*

**Benoît Guillaume, farmer in Brans - France**

*« HAYTECH allows us to get real-time temperature data which helps us control the quality of the final product. »*

**Christophe Colas, Durepaire SA - France**
